

Give Your Remote Access and KVM Systems a Health Check-up

Remote access to your physical and virtual servers, intelligent PDUs, and serial devices is critical to ensuring uptime and productivity for your users. Raritan's CommandCenter® Secure Gateway deployment provides a secure, single point of remote access and control—simplifying remote management and expediting troubleshooting.

But, if you haven't been keeping up with version updates, or are using out of warranty products, then you can be putting yourself and your critical business resources at *risk* of not being there when you need them the most.

Raritan's Healthcheck provides you with an assessment of your current deployment and how you can get the most of your remote access and control. The Healthcheck can help:

- ▶ Increase your productivity with improved operations
- ▶ Ensure compatibility, reliability and connectivity
- ▶ Reduce IT infrastructure management costs
- ▶ Plan for future data center IT growth

Take advantage of our one day "HealthCheck" Service 50% off for qualified customers*

Contact us today and let Raritan experts ensure your critical infrastructure is there for you when you need it most.

Raritan continues to support our valued customers with these additional offers*:

- ▶ Synchronized Warranty Program
- ▶ KVM and Serial Trade-In Program

For more information, contact your local sales rep or visit us at www.raritan.com/products/professional-services/
